Safety Chart Notes:

■ = "Vaping Simulation" (Discharge 10 secs, Rest 5 secs)

■ = Continuous Discharge (for industrial use only)

Safety Standard: Up to 70°C is safe for vaping. For full battery test results, charts, and other battery specifications, please check: aspirecig.com/battery

- A. Never use batteries with a damaged wrapper in any Aspire mod, as it is a safety hazard.
Batteries with a damaged wrapper include (but are not limited to*) the following:
- 1. Damaged wrapper around the positive terminal
 - 2. Damaged wrapper around the negative terminal
 - 3. Wrappers peeled off around either positive or negative terminals
- *Damage may also include tears or holes in the wrapper along the length of the battery.
- B. Always carry your spare batteries in (a) protective case(s) designed specially for the purpose to avoid short circuits and possible accidents.
- C. Batteries can become volatile when exposed to extremes of temperature.
